

Amendments to the Specification:

Please replace of the Abstract of the present application with the following new Abstract. A clean copy of the new Abstract is included on a separate sheet after the Remarks section of this document.

ABSTRACT

A catheter system for treatment of a vessel bifurcation. The system includes a catheter having first and second balloons positioned on first and second guidewire lumens, respectively. A common inflation lumen is used to inflate the first and second balloons. Proximal portions of the first and second balloons are bonded to the inflation lumen.
